Instructors: David Carver and Bernardo Domingues	Ation  This session will cover a very important part of the project execution - project closeout. We will discuss closeout matrixes and the important tips on closing out a project, as well as lessons learned from previous projects that help on new projects moving forward.	Instructors: Stacy Jellison	This session will discuss the importance of leadership involvement for setting a safety culture, incident and case management, regulatory agencies/requirements, and methods to keep workers safe. Topics will include Skanska's Injury Free Environment, what constitutes a recordable and case management methods, resources available, and real examples of engineering and administrative controls.			Instructors: David Carver and Bernardo Domingues	Project Execution will include the process of forecasting, purchase orders, day-to-day requirements, and communications necessary for a successful project.		Instructors: Kathleen Corrigan and Dan Cox	This session reviews the fundamentals of scheduling. Scheduling plays a key role in the success of a project. In many cases there is a direct relationship between a well-planned project and cost savings. The core function of a schedule is to allow all project participants to get information they need to plan and accomplish their work. The schedule is also key in the communication process of the project.		Instructors: Debby Fletcher and Jeanne Boatman	This session will go over the fundamentals of construction accounting and focusing on some of the big items that create the most obstacles to getting paid. Part of this process will be walking contractors through the proper way of completing pay submittals
